

Active-period change for all 49 species

Duration-weighted days 0-14 versus the preceding 14 days, per additional recorded event link.
Filled points are positive BH survivors ($q < 0.05$); open points include non-survivors and adjusted decreases.

Checklist reporting

Reported number

No point is drawn for a non-estimable component. The fixed Stage 2 family contains 49 species per outcome.
Two negative checklist-reporting estimates have $q < 0.05$ but remain open under the requested positive-survivor convention.
